

ABSTRACT OF THE DISCLOSURE

A cushion construction includes a center cushion portion having superposed top and bottom cushions and a plurality of peripheral cushions, each formed from two fabric layers with a filling therebetween. An insert end of each peripheral cushion is inserted between the top and bottom cushions with the outer end exposed beyond such that all of the peripheral cushions can be arranged in an assembled condition at positions around the outer edge of the center cushion portion with the outer ends exposed to simulate petals of a flower. Patches of hook and loop fastening materials fasten each peripheral cushion between the top and bottom cushions and allowing release of the peripheral cushions and the center cushion portion for individual use.
